PROFILE

Software engineering student with hands-on experience building full-stack applications, backend systems, and real-time software using Java, Spring Boot, React, and Python. Strong foundation in object-oriented programming, data structures, databases, REST APIs, and software engineering principles. Currently learning Salesforce development through Trailhead with hands-on exposure to Apex programming, SOQL, and CRM fundamentals.

EDUCATION

Chandigarh University

B.E. Artificial Intelligence & Machine Learning, CGPA: 8.4

Adinath Public School

Class XII – 84.3%

Punjab, India

2023–2027

Rajasthan, India

2023

TECHNICAL SKILLS

Languages: Java (Core), Python, C++, JavaScript, TypeScript, SQL, HTML/CSS, GDScript

Backend: Spring Boot, REST APIs, Spring Security, JPA/Hibernate, WebSockets, FastAPI, Flask

Salesforce: Trailhead (Quick Start: Apex, Apex Basics & Database), Apex (Basics), SOQL (Basics)

Frontend: React, Tailwind CSS

Databases: PostgreSQL, MySQL, MongoDB, Firebase, Supabase

Core CS: Object-Oriented Programming, Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Basic System Design

Tools: Git, GitHub, Docker, Maven, Linux/Unix, Jira, VS Code, Godot, Figma

Concepts: RESTful Architecture, JWT Authentication, API Integration, Modular Architecture, Debugging, Unit Testing, CRM Fundamentals.

PROJECTS

Comp.io – Wordzzle (Ranked Multiplayer Word Game) | Java, Spring Boot, React, PostgreSQL 2026

- Built a full-stack real-time multiplayer Wordle-style game using Java, Spring Boot, React, TypeScript, PostgreSQL, and WebSockets featuring ranked matchmaking, secure authentication, and responsive gameplay.
- Designed a modular backend with server-authoritative game logic, REST APIs, Spring Security, JPA/Hibernate, and WebSocket communication supporting ELO rankings, reconnect recovery, and persistent match history.
- Developed a responsive React frontend with optimistic UI updates, live opponent synchronization, and production deployment using Docker Compose, Render, Vercel, and Supabase PostgreSQL.

YoChan – Offline AI Assistant | Python, Linux, APIs 2026

- Developed an offline desktop assistant automating application launch, system controls, and utility management on low-resource Linux systems.
- Integrated wake-word detection and offline speech-to-text pipelines achieving sub-200ms response time for common commands.
- Designed modular command handlers emphasizing maintainability, extensibility, and efficient execution.

KrishnaGPT | React, Python, Firebase, REST APIs 2025

- Built a full-stack chatbot application using React, Python, Firebase, and REST APIs with session-based memory for multi-turn conversations.
- Implemented asynchronous REST API handling, request validation, and structured exception management to improve reliability and fault tolerance.
- Integrated realtime database storage and deployment workflows to support scalable user interaction management.

Squarey Maze – 2D Puzzle Game | Godot, GDScript, Android 2024

- Developed and deployed a 2D Android puzzle game featuring 15+ interactive levels and reusable event-driven gameplay systems.
- Optimized rendering and asset-loading workflows to maintain stable ~60 FPS performance on low-end Android devices.
- Designed reusable scene architecture and modular gameplay systems to simplify debugging and future feature development.

ACHIEVEMENTS

1st Place – BAGIC Hackathon (Bajaj Allianz)
1st Runner-Up – Kraf Think Hackathon
3rd Place – HackTech, Thapar University

CERTIFICATIONS

Machine Learning Specialization (Coursera)
GitHub Foundations
Salesforce Trailhead: Quick Start: Apex, Apex Basics & Database
